How to calculate the CGPA

The Cumulative Grade Points Average (CGPA) is the average of grade points achieved in all the subjects (excluding additional 6th subject) as per Scheme of Studies.

In order to calculate the scores, the candidates can check the example shown below:

Eg, Grade Points for 5 subjects is:

Subject 1: 9

Subject 2: 8

subject 3: 7

Subject 4: 10

Subject 5: 9

Step 1: Add the grade points of all the five subjects: $9+8+7+10+9= 43$

Step 2: Divide the total by 5: $43/5= 8.6$

Overall CGPA=8.6

Step 3: Multiply by 9.5 i.e. $9.5*8.6= 81.7$ per cent (overall percentage)

The candidates can opt for either of the streams, after the declaration of exams, based on the CGPA they score. The options available to them are: Science stream, Commerce stream, Arts/Humanities. For subject wise, percentage, multiply 9.5 with the Grade Points of that particular subject.
